Example: Expectation. Let X be the number of draws required to find a certain item among a ite-s total. Assume that the items are not replaced after they are chosen. Also assume that the selections are done blindly.  $X=1 \text{ with probability } \frac{1}{n}$   $X=2 \text{ with probability } \frac{1}{n}$   $X=3 \text{ with probability } \frac{1}{n}$   $X=3 \text{ with probability } \frac{1}{n}$   $X=n \text{ with probability } \frac{1}{n}$  X=
