Return to example where 20 CD's, 5 desirable, 15 undesiable, pick 3 and let X denote the number of desirable items among the 3. N=20 where $X_j = 1$ if 5th item is desirable M= 5, N-M=15 Xi = 0 otherwise n = 3 $E(X^2) = E((X_1 + X_2 + X_3)(X_1 + X_2 + X_3))$ = E(X, X,) + E(X, X2) + E(X, X3) $+E(X_{2}X_{1})+E(X_{2}X_{2})+E(X_{3}X_{3})$ + $E(X_{3}X_{1})+E(X_{3}X_{2})+E(X_{3}X_{3})$ all E(X; X;) terms are the same Why? Just think about all E(X; X;) terms are the same why? clanging order of select $E(X^2) = 3E(X,X,) + \underbrace{(3)(2)E(X,X_2)}_{=L}$ here X, is an indicator random variable so X, X, = X, $S_{\bullet} E(X,X_{i}) = E(X_{i}) = \frac{5}{20} = \frac{4}{4}$ also X, and X2 are indicators that are dependent on each other $X_1 \cdot X_2 = 1$ if $X_1 = 1$ and $X_2 = 1$ X, · X2 = 0 othervise E(X,X2) = 1P(X,X2=1) + OF(X,X=0) $= P(X_i=1 \text{ and } X_i=1)$ = $P(X_1=1)P(X_2=1|X_1=1) = \frac{1}{4} \cdot \frac{4}{19} = \frac{1}{19}$ <u>5</u> <u>7</u> <u>19</u> $E(X^2) = (3)(\frac{1}{4}) + (3)(2)(\frac{1}{19})$ $=\frac{3}{4}+\frac{6}{19}$
